**Athena**, is an application that integrates the university management systems and technologies that students, teachers and officials of a university use in their daily life. Its main aim is to make the university administration more efficient as well as productive.

- 1 Absence of a single functional platform for university students and teacher.
- 2 Absence of a problem-solving and knowledge-sharing platform among individuals of associated departments.
- 3 Realizing the importance of transparency in the **result processing system**, removing the hassle of getting printed grade sheets manually.

Implementing different necessary tools used by teachers and students in a single platform. Making the daily processes of administration more efficient and convenient and accessing the benefits of multiple platforms at one place.

- Registration and Login System for teacher, students and administrator.
- Instant Result processing
- Live attendance taking.
- Library Managements
- Virtual workspace for teacher and students interaction.
- Notification system.
- Study material repository.
- Question / Answer Platform

A platform for any university to maintain their administrative work with more productivity and provide flexibility of interaction to students and teachers with an automated system.

Automating the core features of educational apps that are used on a daily basis at one place for all.

**THANK YOU**
